**ECONZ WIRELESS AND DIVERSINET EXECUTIVES TO DEMONSTRATE BREW
VERSIONS OF TWO-FACTOR AUTHENTICATION SECURITY AT BREW 2006
CONFERENCE**

NEWPORT BEACH, CALIF and TORONTO, CANADA — June 01, 2006 — ECONZ Wireless, a leading global developer of mobile software solutions for business and consumer markets, and Diversinet Corp. (OTCBB: DVNTF), a leading provider of mobile-enabled personal authentication and security solutions, today announced they will be demonstrating BREW® versions of mobile-enabled two-factor authentication at BREW 2006. ECONZ Wireless and Diversinet will showcase their products at booth #23 at the BREW 2006 Conference, being held May 31 – June 2 in San Diego.

"BREW 2006 is the ideal event for ECONZ Wireless to demonstrate our mobile security solutions to mobile network operators and BREW developers," said Michael Hartley CEO, ECONZ Wireless. "We are excited about our partnership with Diversinet and the opportunity to bring two-factor authentication to BREW handsets and applications. We believe this will allow BREW operators and developers to deliver cost-effective and extra-secure applications in markets where identity, age and location concerns previously made this difficult."

“A broad range of mobile consumer and business applications such as mobile e-commerce, mobile banking and business applications require developers to think about ways they can provide additional security features to make consumers feel comfortable,” said Sachin Deshpande, head of developer relations for QUALCOMM Internet Services. “Mobile soft tokens can provide a two-factor authentication solution that can complement the robust security capabilities offered by the BREW solution.”

Earlier this month, ECONZ Wireless and Diversinet announced a technology partnership that allows ECONZ Wireless to integrate and extend the Diversinet MobiSecure client into current and future ECONZ Wireless applications for sale worldwide through the company’s mobile operator partners. The two companies are also developing a BREW extension for two-factor authentication with location-based services (LBS). This extension will allow developers of BREW applications to bring a new level of security and user authentication for their LBS products.

The BREW solution drives the discovery and delivery of data services. BREW customers can benefit from several offerings which include: uiOne™ for rich, integrated and dynamic user experiences with fast access to high revenue services on wireless devices; deliveryOne™ for differentiated and tightly integrated, operator-managed support and delivery of advanced wireless data content and services; and marketOne™ for a quick-to-market, hosted, scalable content delivery service that includes media titles, flexible management and monetization, content provider settlement and business intelligence services. QUALCOMM offers this comprehensive set of BREW offerings to meet the distinct needs of companies delivering mobile products and services around the world.

About ECONZ Wireless

ECONZ Wireless is a leading global developer of mobile software solutions for business and consumer markets. With an outstanding wireless pedigree and exceptional products, the company is helping to drive widespread implementation of mobile applications that entertain consumers and increase business user productivity and efficiency.

ECONZ Wireless is a QUALCOMM BREW Select™ Developer and markets its products internationally in North America, South America, the United Kingdom and Australasia. Some ECONZ Wireless products are sold in the United States exclusively through a Verizon Wireless National Joint Marketing Agreement (JMA). ECONZ Wireless is based in Orange County, California, and is located at 3900 Birch Street in Newport Beach. For more information on ECONZ Wireless and its products, go to www.econz.com or call 1-866-57- ECONZ. Product screen shots are available upon request.

About Diversinet

Diversinet is a leading provider of mobile-enabled personal authentication and security solutions for the wireless world. The company's software and services protect a user's identity and provide secure access for new, innovative consumer and business applications using a variety of mobile phones, Personal Digital Assistants (PDAs) and personal computers. Diversinet's highly scalable, open mobile security platform enables enterprises and service providers to rapidly develop, deploy and manage next-generation wireless security services that leverage the more than 2.5 billion mobile devices and PCs deployed today. The Diversinet MobiSecure suite of mobile tokens and MASC offerings are available on all intelligent mobile device platforms, including Microsoft, RIM, Symbian, Palm and Java-based phones, as well as personal computers running the Windows operating system. Connect with Diversinet Corp. at www.diversinet.com.

Representatives of ECONZ Wireless and Diversinet will be available at the ECONZ Wireless booth #23 at BREW 2006 to discuss the security solution being delivered by ECONZ Wireless and Diversinet, as well as to review the market opportunity for mobile-enabled strong authentication. To schedule a briefing meeting with ECONZ Wireless and Diversinet experts, please contact Lisa Nemeč at 949-715-3040, lisa.nemec@gmail.com, or David Oro at 707-558-8585, dto@cormancom.com.
