

FOR IMMEDIATE RELEASE

**DIVERSINET DEMONSTRATES BREAKTHROUGH IN MOBILE ELECTRONIC
PATIENT RECORDS**

**MobiSecure Wallet and Vault Power AllOne MobileSM Personal Health Information
System**

TORONTO, Canada, May 14, 2008 – Launching its entry into the health care industry, Diversinet Corp. (OTCBB: DVNTF), a leading provider of wireless data application and security infrastructure products and services, today announced it is participating in a demonstration of a breakthrough in mobile electronic patient records at the 24th annual TEPR (Towards Electronic Patient Records) Conference being held in Fort Lauderdale, Florida, May 19-21. AllOne Health GroupSM (AHG), in conjunction with Diversinet, will demonstrate how MobiSecureTM Wallet and Vault products enable the new AllOne MobileSM service to achieve privacy compliance while giving consumers instant access to their personal health care records – anywhere, anytime – through their mobile phones without the need for an Internet connection.

AllOne Mobile saves personal health care records (PHRs) in a secure environment provided by MobiSecure Vault, and links securely to the MobiSecure Wallet on users' mobile phones, giving them well-organized, easy-to-use, 24/7 mobile access to their medical information. With this system, users can securely manage and share their personal health records with physicians, hospitals, clinics and emergency personnel to help to improve medical outcomes.

“MobiSecure Wallet and Vault combine the bulletproof security healthcare providers need to meet regulatory compliance with the ease of use consumers need to put all this information at their fingertips through virtually any mobile phone on any network anywhere in the world,” said Albert Wahbe, CEO and chairman of Diversinet. “Consumers have peace of mind that their medical history, test results and medications are secure while gaining instant access to them to significantly reduce time to treatment and medical errors.”

The AllOne Mobile application is downloaded wirelessly to phones and is automatically updated with the most up-to-date security and features available.

With AllOne Mobile, consumers and their families are able to:

- View and share insurance coverage information with physicians, hospitals, pharmacies and other health care providers,
- Track prescription drugs,
- Catalog allergies, or fax a child's allergy records to the school nurse,
- Send health information, including a family health history, to a physician, and
- Access health tips to better manage chronic conditions.

“Our goal is to show how mobile phones can be used to improve the quality of medical care and convenience for consumers, and we believe this revolutionary approach will forever change the patient/consumer relationship with health care providers and payers,” said William C. Reed, president and CEO of AllOne Health Group. “Secure portability of personal health records at the time of care, the convenience and peace of mind in being able to receive fast and secure coverage confirmation – all accessed securely through a mobile device – makes this solution a groundbreaking product that will enable consumers to take control of their health care in a cost effective manner.”

The AllOne Health Group launched AllOne Mobile in April 2008 to the Hospital Service Association of Northeastern Pennsylvania (HSA). HSA became the first health plan in the U.S. to adopt this technology. AllOne Mobile also will be used by employees of major businesses and the general public to better manage their health and well-being.

Based on Diversinet's MobiSecure Strong Authentication technology, MobiSecure Wallet and Vault give users secure and immediate access to a host of medical, financial and other personal information, as well as other critical, privileged data. These products also give health care providers, banks and other financial institutions and insurance companies a unique and easy-to-use solution they can use to provide individuals with fast, convenient, and secure access to new applications and services via mobile phone, PDA or PC browser.
